

Sthree Swabhiman – Menstrual Hygiene and Dignity Initiative for Girls in MJPTBCWREIS Residential Schools and Junior Colleges, Telangana

Executive Summary

Menstrual hygiene is a pressing public health concern, particularly for adolescent girls in socially and educationally disadvantaged communities. In Telangana, girls studying in government residential educational institutions under the **Mahatma Jyotiba Phule Telangana Backward Classes Welfare Residential Educational Institutions Society (MJPTBCWREIS)** face barriers related to menstrual stigma, lack of awareness, and limited access to sanitary products.

The **Sthree Swabhiman** initiative proposes a structured and scalable model to promote menstrual hygiene management (MHM) across all **MJPTBCWREIS 146 girls-only residential schools** and **129 girls-only junior colleges**, reaching approximately **1,23,000 adolescent girls** across Telangana. The initiative integrates health education, product access, and school-led delivery to foster long-term behavioral change and dignity-centered hygiene practices.

Key Features of the Program:

- **Annual menstrual health awareness sessions** in every MJPTBCWREIS girls' school and junior college.
- **One-time sanitary napkin starter kits** (12 packs) distributed to newly enrolled girls in Classes VI to XII and junior college (Intermediate I year).
- **Training of school and college staff and peer mentors** to deliver sessions sustainably in future years.
- **Use of Telugu IEC materials** (flipbooks, story-based visuals, posters) to normalize menstruation and improve comfort.
- **Light-touch monitoring and year-end reporting** to track outcomes and feedback.

Why It Matters:

Studies and field reports show that:

- Girls in rural Telangana miss 4–5 days of school or college each month due to menstruation.
- Many still use unsafe materials like cloth, paper, or ash due to high pad costs or lack of availability.

- Period stigma persists due to cultural taboos and silence at school, college, and home.

Alignment with UN Sustainable Development Goals:

SDG	Contribution
SDG 3 – Good Health and Well-being	Improves menstrual hygiene and reduces infections.
SDG 4 – Quality Education	Reduces absenteeism and dropout due to menstruation.
SDG 5 – Gender Equality	Empowers girls through knowledge and dignity.
SDG 6 – Clean Water and Sanitation	Promotes safe disposal and hygiene practices.
SDG 10 – Reduced Inequalities	Supports marginalized BC, SC, ST, and minority girls.
SDG 17 – Partnerships for the Goals	Leverages CSR and NGO collaboration.

This initiative goes beyond product delivery — it's about creating **a confident, health-literate generation of young women** in Telangana's backward classes welfare institutions.

2. Problem Statement

Menstruation is a natural biological process, yet in many parts of rural and tribal Telangana, it continues to be surrounded by silence, stigma, and harmful myths. This lack of awareness — combined with limited access to affordable hygiene products — leads to significant health, educational, and social consequences for adolescent girls, particularly those enrolled in government-run residential institutions under **MJPTBCWREIS**.

Girls studying in **MJPTBCWREIS residential schools and junior colleges** — largely from BC, SC, ST, and minority backgrounds — face systemic and cultural barriers that impact their health, dignity, and education during menstruation.

Key Issues Identified:

Lack of Menstrual Awareness:
A large number of adolescent girls begin menstruating with little or no knowledge about

the process. Cultural taboos and a lack of structured menstrual health education in schools and colleges prevent open discussion, reinforcing fear, confusion, and shame.

Poor Hygiene Practices:
According to NFHS-5 data and field studies in Telangana, over 50% of rural women and girls still use unhygienic alternatives like cloth, sand, ash, or newspaper — often reused without proper cleaning. This increases the risk of reproductive tract infections (RTIs), urinary tract infections (UTIs), and skin-related issues.

Inaccessibility and High Costs:
Commercial sanitary napkins remain either unavailable or unaffordable (₹25–₹40 per pack) for many families. Even in institutional setups, regular and adequate access is not guaranteed, and government schemes are inconsistent in their coverage.

School and College Absenteeism:
Girls in residential schools and junior colleges often miss 4–5 days each month during menstruation due to lack of sanitary pads, clean private toilets, or fear of leaks and social embarrassment. Such absenteeism adversely affects academic performance and, in some cases, contributes to dropout.

Lack of Disposal Infrastructure:
Even when sanitary napkins are available, the absence of safe, private, and eco-friendly disposal mechanisms in many campuses leads to environmental pollution, shame, and unhygienic practices like burning in open spaces.

Missed Economic and Leadership Opportunities for Girls and Women:
Menstrual stigma curtails girls' participation in leadership and extracurricular activities. Simultaneously, rural and urban poor women lack livelihood avenues — although local production of sanitary napkins offers potential to bridge menstrual access gaps while generating income.

3. Project Objectives

The Sthree Swabhiman initiative seeks to empower adolescent girls studying in **MJPTBCWREIS residential schools and junior colleges** across Telangana with knowledge, confidence, and initial support to manage menstruation with dignity and hygiene. Rather than creating dependency on long-term product subsidies, the program aims to instill menstrual health as a personal responsibility and life skill.

Core Objectives of the Project:

- To deliver structured menstrual hygiene awareness sessions once per academic year in each girls-only residential school and junior college under MJPTBCWREIS.
- To equip all newly enrolled adolescent girls (Classes 6–12 and Junior College First Year) with a one-time starter sanitary napkin kit, enabling them to adopt safe and hygienic menstrual practices.
- To promote menstruation as a health and hygiene priority, not a taboo, by embedding it into institutional culture through open discussions, peer mentoring, and visual awareness tools.

- To train wardens, teachers, and peer student leaders within each institution to independently conduct the program in future years using reusable educational content and formats.
 - To create a scalable and replicable delivery model that reaches all 146 residential schools and 129 junior colleges for girls, serving over 1,23,000 students annually with minimal recurring overhead for the NGO.
 - To normalize the conversation around menstruation as part of adolescent well-being, thereby increasing school and college participation, reducing discomfort and shame, and fostering healthier lifelong practices.
4. **Target Beneficiaries**

This initiative targets adolescent girls enrolled in the **146 girls-only MJPTBCWREIS Residential Schools** (Classes VI to XII) and **129 MJPTBCWREIS Junior Colleges for Girls** (Intermediate I and II year), which serve primarily BC, SC, ST, and minority students from underserved and economically backward communities across Telangana.

Institutional Snapshot:

- 146 Girls-Only Residential Schools across Telangana
- 129 Girls-Only Junior Colleges under MJPTBCWREIS
- Estimated total enrollment: ~1,23,000 girls and ~62500 adolescent girls.
- All institutions are fully residential with free education, meals, and basic facilities

Primary Beneficiaries:

- Adolescent girls (Classes VI–XII and Intermediate I & II Year) across 275 institutions
- Estimated reach: ~1,23,000 girls

Secondary Beneficiaries:

- Lady wardens, science/biology teachers, and peer hygiene leaders trained to facilitate awareness sessions
- School and junior college management staff responsible for program sustainability

5. Project Components

The *Sthree Swabhimani* initiative follows a practical, high-impact model centered around a **once-a-year intervention** in each government residential school for girls. Rather than implementing ongoing monthly product distribution, the project emphasizes awareness, dignity, and self-reliance — supported by an annual sanitary pad kit to promote healthy adoption of hygienic practices.

The program is structured around **three integrated components** that work together to ensure long-term behavioral change and institutional sustainability.

A. Menstrual Hygiene Awareness and Education

Objective: To ensure that every newly enrolled adolescent girl receives foundational, stigma-free education about menstruation, hygiene, and emotional well-being.

Key Activities:

- Conduct **one interactive awareness session per school** annually, aligned with the academic calendar (typically in June–July).
- Deliver sessions through a mix of:
 - Trained school staff (wardens, science/biology teachers)
 - Local health educators (NGO/district PHC support)
 - Senior student peer leaders
- **Content Themes:**
 - Understanding the menstrual cycle and physical changes
 - Breaking myths and taboos around menstruation
 - Best hygiene practices and disposal methods
 - Nutrition, mental health, and body confidence
- **Delivery Tools:**
 - Visual aids and Telugu-language IEC handouts
 - Demonstration materials and story-based Q&A
 - Small-group discussions and confidence-building games

B. One-Time Sanitary Napkin Kit Distribution (Annual)

Objective: To provide all newly enrolled girls with an annual sanitary pad supply to kick-start hygienic habits — without encouraging long-term subsidy expectations.

Key Activities:

- **Each girl receives a kit** during the awareness session, containing:
- **12 packs of sanitary napkins** (covering ~1 full academic year)
- A pictorial leaflet/user guide on safe usage and disposal
- Napkin procurement is done via **affordable, Make-in-India vendors** at **~₹45 per pack**
- Framed as a one-time dignity starter, not a continuous free supply

- Encourages girls to value menstrual hygiene as part of their routine self-care — similar to soap, undergarments, or personal items

C. School Capacity Building and Sustainability Model

Objective: To enable each institution to independently deliver menstrual health education every year — even without continued NGO presence.

Key Activities:

- Train 2–3 focal persons per school through a **Training of Trainers (ToT)** program:
 - Lady warden
 - Science/biology teacher
 - Senior peer mentor/student
- Provide schools with a **reusable IEC toolkit**, including:
 - Laminated posters
 - Flipbooks or presentation slides
 - Session scripts in Telugu
- Appoint **Peer Hygiene Leaders** in each batch to guide incoming students in future years
- NGO continues to play a **light-touch support role in Year 2 and Year 3**, enabling the school to take full ownership by Year 4

6. Implementation Model

The *Sthree Swabhiman* project follows a simple, scalable implementation cycle aligned with the academic calendar of Telangana’s government residential schools under KGBVs. It ensures that every newly enrolled adolescent girl receives menstrual health awareness and starter support once per academic year — without placing recurring operational burden on the NGO or the school system.

The model emphasizes **behavior change**, **school-led continuity**, and **starter support**, not long-term product dependency.

Phase 1: Planning and School Coordination (April – May)

- Finalize the list of participating KGBVs girls-only schools for the academic year.
- Coordinate with KGBVs zonal officers, principals, and wardens to align dates and logistical plans.

- Confirm student intake estimates and starter kit quantities per school.

Phase 2: Capacity Building and Material Preparation (May – June)

- Conduct **Training of Trainers (ToT)** workshops for 2–3 designated staff per school (e.g., lady warden, science teacher).
- Train selected **senior girl students as Peer Hygiene Mentors** to support facilitation.
- Prepare and distribute reusable IEC content, including posters, charts, session guides, and product instructions.

Phase 3: Awareness Event and Starter Kit Distribution (June – July)

- Organize a **one-day awareness event in each school** shortly after reopening.
- Conduct sessions using interactive, student-friendly methods covering:
 - Menstrual cycle, hygiene practices, emotional well-being, and myth-busting
- Distribute **starter kits** to each girl (e.g., sanitary pad packs + leaflet).
- Encourage peer discussion, open Q&A, and message reinforcement through follow-up classroom discussions.

Phase 4: School-Led Continuity (August – March)

- Trained staff and peer mentors will independently repeat key messages during:
 - Adolescent health clubs
 - Science periods or personal health sessions
- Schools will maintain and display **awareness materials** in common areas.
- Girls are encouraged to continue safe practices through personal responsibility and local purchase.

Phase 5: Monitoring, Feedback, and Light Touch Support (Quarterly)

- NGO team conducts light-touch monitoring through:
 - Monthly call check-ins with wardens

- Sample feedback forms from girls
- Field visits to a few sample schools per district
- Collect success stories, improvement suggestions, and data on perceived impact.
- NGO prepares a **year-end report** and refreshes training materials for the next cycle.

This model ensures that the initiative is:

- **Efficient:** Only one-day delivery per school each year
- **Effective:** Every new girl is equipped early in the school year
- **Sustainable:** Ongoing awareness maintained by school staff, not NGO field teams
- **Scalable:** Easily replicable across 173+ institutions statewide

7. Implementation Timeline

The *Sthree Swabhiman* initiative follows an annual academic cycle, with all key activities clustered around school reopening and onboarding of new students. This schedule ensures that every newly enrolled adolescent girl receives menstrual health education and starter support early in the year, with sustainability mechanisms embedded through school-based training and peer-led reinforcement.

This timeline is based on a standard academic year of **9 months** (typically June to March).

Phase	Timeline	Key Activities
Phase 1: Planning & School Finalization	April – May	- Identify participating schools for the academic year - Estimate student intake and kit quantities - Coordinate with school heads and zonal officers
Phase 2: Capacity Building	May – June	- Conduct Training of Trainers (ToT) for wardens and teachers - Train peer mentors - Prepare session kits and reusable IEC materials

Phase 3: Awareness Event + Starter Distribution	June – July	- Run a one-day menstrual health session in each school - Distribute starter kits (2–3 sanitary napkin packs per girl)
Phase 4: School-led Reinforcement	August – March	- Peer hygiene mentors and teachers revisit key messages during the year - Use visual materials to reinforce menstrual health messages - Encourage individual responsibility and healthy habits
Phase 5: Monitoring & Feedback	September – December (ongoing)	- Light-touch monitoring through phone check-ins, feedback slips, and occasional visits - End-of-year summary report with insights and recommendations for next cycle

8. Budget Overview

The Sthree Swabhiman initiative is designed to deliver an annual menstrual hygiene intervention across **275 girls-only MJPTBCWREIS residential schools and junior colleges** in Telangana. The budgeting model is based on the actual enrollment estimate of approximately **1,23,000 adolescent girls**, ensuring cost-efficiency and comprehensive coverage of the target group.

♦ A. Budget Summary by Category

Category	Details	Unit Cost (INR)	Quantity	Total Cost (INR)
I. Product Cost				
Sanitary Napkin Packs	12 packs per girl per year	₹45	1,23,000 girls × 12 packs	₹66,42,0000
II. Program Delivery Cost				
Awareness Session Facilitation	One-day MHM awareness session	₹10,000	275 schools/colleges	₹27,50,000

Training of Trainers (ToT)	Staff + peer mentor capacity building	₹5,000	275 institutions	₹13,75,000
IEC Materials	Telugu handouts, flipbooks, posters	₹3,000	275 institutions	₹8,25,000
Monitoring and Feedback	Follow-up, phone tracking, light supervision	₹2,000	275 institutions	₹5,50,000
Total Project Cost (Annual)				₹7,23,42,000

◇ B. Key Budget Notes

- Total sanitary napkin packs distributed: 14,76,000 packs
- Cost per girl (product + delivery): approx. ₹588
- Estimates can be optimized through bulk procurement or CSR in-kind contributions
- Scalable model: institution-level delivery cost remains consistent

9. SDG Alignment and Strategic Benefits

The *Sthree Swabhimani* initiative directly contributes to India's commitment toward achieving the United Nations Sustainable Development Goals (SDGs), particularly in the context of adolescent girls' health, education, and dignity in rural and tribal settings.

◇ A. Alignment with Key SDGs

SDG	Goal Title	Contribution Through This Project
SDG 3	Good Health and Well-being	Promotes menstrual hygiene, reduces infections, and improves overall well-being of adolescent girls
SDG 4	Quality Education	Reduces school absenteeism and dropout due to menstruation-related stigma or lack of sanitary products
SDG 5	Gender Equality	Empowers girls with knowledge and dignity, challenges taboos, and ensures access to safe menstrual care
SDG 6	Clean Water and Sanitation	Reinforces hygiene education and responsible product disposal practices

SDG 10	Reduced Inequalities	Focuses on vulnerable groups — rural, tribal, and socially disadvantaged adolescent girls
SDG 17	Partnerships for the Goals	Enables collaboration between government, NGOs, and CSR partners for scalable health interventions

◇ B. Strategic and Social Benefits

- **Improved School Attendance:** Girls are more likely to stay in school during their periods when they have access to sanitary products and are educated about menstrual health.
- **Behavioral Change:** Structured awareness sessions lead to increased comfort, self-confidence, and long-term hygiene habits.
- **Capacity Building:** Empowers school staff and senior students to carry forward the message year after year, making the model institutionally sustainable.
- **Equity and Inclusion:** Prioritizes adolescent girls from Scheduled Caste (SC), Scheduled Tribe (ST), and Other Backward Class (OBC) backgrounds, aligning with national inclusion policies.
- **Cultural Sensitivity:** Materials and training are designed in regional language (Telugu) and tailored to local beliefs to ensure acceptance and resonance.

10. Key Benefits and Outcomes

The *Sthree Swabhimani* initiative is designed to achieve tangible improvements in menstrual health awareness, hygiene practices, and dignity for adolescent girls studying in government residential institutions across Telangana. Beyond direct sanitary pad distribution, the program fosters long-term behavioral change, school-level capacity building, and empowerment.

◇ A. Direct Benefits

Area	Benefit
Health & Hygiene	Girls gain access to safe, hygienic menstrual care products, reducing infections and discomfort.
Awareness & Education	Myths and taboos around menstruation are challenged through structured, age-appropriate education.

School Attendance	Reduced menstruation-related absenteeism by ensuring girls feel confident and prepared.
Psychosocial Well-being	Enhanced self-esteem and dignity among adolescent girls.

◇ B. Institutional Outcomes

Area	Outcome
Capacity Building	School wardens, teachers, and peer mentors are trained to sustain menstrual health programming annually.
Sustainable Delivery	Educational materials and tools remain in the school for reuse each academic cycle.
Operational Simplicity	One-time annual engagement model minimizes NGO overhead and encourages school ownership.

◇ C. Long-Term Social Impact

- **Reduction in Period Shame:** Encourages open conversations and normalizes menstrual health among girls and boys in school communities.
- **Early Health Literacy:** Equips girls with lifelong knowledge on reproductive health and self-care.
- **Equity in Access:** Prioritizes socially and economically disadvantaged girls, contributing to inclusive development.
- **Community Ripple Effect:** Girls become agents of change in their families and villages, spreading menstrual health awareness beyond school walls.

11. Key Performance Indicators (KPIs)

To ensure effective implementation and measurable outcomes, the *Sthree Swabhiman* initiative will track both quantitative and qualitative indicators. These KPIs will guide internal monitoring, help evaluate program success, and provide transparent reporting for CSR and institutional partners.

◇ A. Implementation KPIs

Indicator	Target / Measurement
Number of schools covered	100% of planned schools per phase (e.g., 50 in pilot, 173 full-scale)
Number of girls reached	Based on actual school enrollment data (~1,01,000 total)
Number of awareness sessions conducted	1 per school annually
Number of starter kits distributed	12 napkin packs × total enrolled girls
Completion of ToT sessions	At least 2–3 staff/peer mentors trained per school
IEC material dissemination	Display and distribution in 100% of covered schools

♦ B. Outcome KPIs

Indicator	Measurement Approach
% increase in girls using sanitary pads	Baseline vs. follow-up survey (sample-based)
Reduction in menstruation-related absenteeism	Pre- and post-intervention comparison (from school logs)
Feedback from girls on awareness session	Feedback forms / group discussions in sample schools
Feedback from school staff on program utility	Structured interviews or quick surveys
Reuse of IEC materials in subsequent cycles	Monitoring visit checks and follow-ups

♦ C. Impact Indicators (Long-Term)

Indicator	How It's Evaluated
-----------	--------------------

Improved comfort and confidence levels	Focus group responses and teacher observations
Continued pad usage after program ends	Follow-up interviews with students (in Year 2)
School adoption of repeat sessions	% of schools repeating awareness sessions with minimal external input

These KPIs will be tracked through a combination of **school reporting, light-touch field monitoring, phone check-ins, and sample surveys**. A year-end summary report will be generated to inform scale-up, highlight success stories, and capture lessons learned.

12. Monitoring and Evaluation (M&E) Framework

A robust Monitoring and Evaluation (M&E) framework is central to the success and sustainability of the *Sthree Swabhiman* initiative. The M&E plan is designed to ensure accountability, capture program impact, and continuously improve delivery by integrating real-time feedback and periodic assessments.

The framework balances **light-touch monitoring for scalability** with **qualitative and quantitative tools** for capturing behavioral and institutional change.

♦ A. Objectives of M&E

1. **Track delivery efficiency** across all program components (awareness sessions, kit distribution, staff training).
2. **Measure short- and medium-term outcomes** among adolescent girls (product usage, hygiene awareness, attendance impact).
3. **Enable feedback-based improvements** for future program cycles.
4. **Ensure transparency and reporting** for CSR sponsors, school authorities, and government stakeholders.

♦ B. M&E Activities by Program Phase

Phase	Monitoring Activity	Method / Tool
Pre-Implementation	Baseline data collection in sample schools (product use, absenteeism)	Surveys, focus groups, school records

During Implementation	Attendance records, distribution tracking, training session logs	NGO reporting forms, school checklists
Post-Session Feedback	Student and staff feedback on awareness sessions and materials	Feedback forms, group reflections
Quarterly Monitoring	Check-in calls with wardens, periodic site visits (sample basis)	Phone interviews, observation checklists
Year-End Evaluation	Summary report on reach, outcomes, lessons learned	Consolidated M&E report

◇ C. Tools and Roles

- **Monitoring Tools:**

- Distribution registers for sanitary napkins
- Awareness session attendance sheets
- Standardized feedback forms (students and staff)
- Sample survey templates for outcome indicators

- **M&E Team:**

- NGO field coordinators will lead data collection
- Trained school focal points (wardens/teachers) will support in-school tracking
- A central M&E officer will compile and analyze results

◇ D. Data Use and Reporting

- **Annual M&E Report:** Shared with funding partners, school administrators, and the Department of Samagra Shiksha.
- **Insights for Improvement:** Used to enhance program design, refine training modules, and support policy advocacy
- **Documentation for Scale-Up:** High-performing models and schools will be highlighted for replication across other districts

13. Sustainability Strategy

Ensuring that the *Sthree Swabhiman* initiative leaves behind a durable impact without creating prolonged external dependency is a core design principle. While sanitary napkin distribution is a key component, the program’s sustainability lies in its ability to institutionalize menstrual hygiene as a part of the school culture — through capacity building, education, and behavior change.

This section outlines a practical sustainability roadmap and a phased exit strategy, aligned with the realities of rural and tribal government residential schools.

♦ A. Core Sustainability Pillars

Pillar	Strategy for Longevity
1. Institutional Ownership	School staff (wardens, teachers) and peer mentors are trained to independently deliver sessions each year.
2. Reusable Educational Assets	Posters, charts, flipbooks, and training manuals in Telugu are left behind in schools for ongoing use.
3. Behavior Change, Not Subsidy Dependence	Students are encouraged to adopt healthy hygiene habits and to make personal choices for continued sanitary product use.
4. Curriculum Integration Potential	With state support, core menstrual hygiene messages can be integrated into health or science classes.
5. Local Partnerships for Pad Access	Schools will be linked to local vendors or CSR-supported micro-entrepreneurs for pad supply beyond the initial year.

♦ B. Realistic Exit Strategy (3-Year Model)

The program is structured as a **3-year stepped exit model** to gradually shift ownership to the schools while maintaining quality.

Year	NGO Role	School Role
Year 1	Full implementation: sessions, distribution, training	Participate, observe, nominate mentors
Year 2	Partial support: NGO runs sessions jointly with schools	School delivers with NGO guidance

Year 3	Remote support only: refresher kits, call support	School independently runs session with student mentors
---------------	---	--

◇ C. Addressing Common Challenges & Realities

Challenge	Response / Mitigation
High staff turnover in schools	Repeat ToT modules each year; train more than one focal person per school
Risk of pad dependency	Program emphasizes starter kits + choice education, not ongoing free provision
Budget limitations in government schools	Model enables low-cost self-sustained delivery after initial NGO involvement
Cultural taboos or reluctance	Uses local-language materials and peer role models to normalize the topic
Disruption due to academic calendar shifts	Flexible delivery window during June–July; regional rollout adaptability

◇ D. Long-Term Vision

The goal is not just product distribution, but the **normalization of menstrual health in educational spaces**. By Year 4 and beyond, the *Sthree Swabhiman* model will:

- Be fully **owned and driven by schools**
- Require **no recurring NGO field presence**
- Be eligible for **state or CSR-led booster funding only when needed**
- Serve as a **replicable framework** for other departments (e.g., Tribal Welfare, BC Welfare)

14. Conclusion and Strategic Appeal

Menstruation, though a natural and universal biological process, continues to limit the educational, social, and emotional well-being of thousands of adolescent girls across Telangana — especially those enrolled in rural and tribal government residential institutions.

Despite advancements in education and health, menstruation remains shrouded in silence, stigma, and misinformation. As a result, adolescent girls often face barriers to attending school, practicing safe hygiene, or even speaking openly about their own health needs.

The *Sthree Swabhiman* initiative seeks to transform this reality — turning menstruation from a barrier into a **platform for empowerment, dignity, and resilience**.

By embedding menstrual hygiene awareness, education, and starter support into the academic calendar of Kasturba Gandhi Balika Vidyalayas, this initiative ensures that **every newly enrolled girl receives timely support** — not just with sanitary products, but with the **knowledge, confidence, and comfort** to manage her menstrual health without fear or shame.

Strategic Appeal for Support

We invite CSR partners, philanthropic organizations, foundations, and social investors to join hands with us in **normalizing menstruation and building dignity-centered schools**. Your support can help:

- Ensure that **no adolescent girl misses school or suffers in silence** because of her period.
- Build a generation of **confident, health-literate young women**, especially from underserved SC/ST and rural communities.
- Establish a **replicable and scalable framework** for menstrual hygiene education that can be extended to other government school networks across India.

Our Shared Vision

With your partnership, we can normalize menstrual health as part of the school environment — where dignity, inclusion, and wellness are non-negotiable for every child.

Together, we can:

- Shatter stigma
- Restore confidence
- And make sure **no girl is left behind because of her period**.
